

Design @ SD Worx

**Here you'll find all you need to
create designs that spark success**

All the necessary links are available here. Links to all of our guidelines, brand information, design systems for products and websites and you'll even find the links for the technical implementation of our design system.

Design libraries

FIGMA

Design Foundation Library

The visual language that represents SD Worx. The colour styles, typography, icons and our spark that make our brand what it is and give life to our product.

[View Figma file →](#)

Website design Library

Contains all necessary building blocks for building websites conform to the SD Worx UX guidelines.

[View Figma file →](#)

Applicaton design Library

Contains all necessary building blocks for building web applications conform to the SD Worx UX guidelines.

Design guidelines

design.sdworx.com

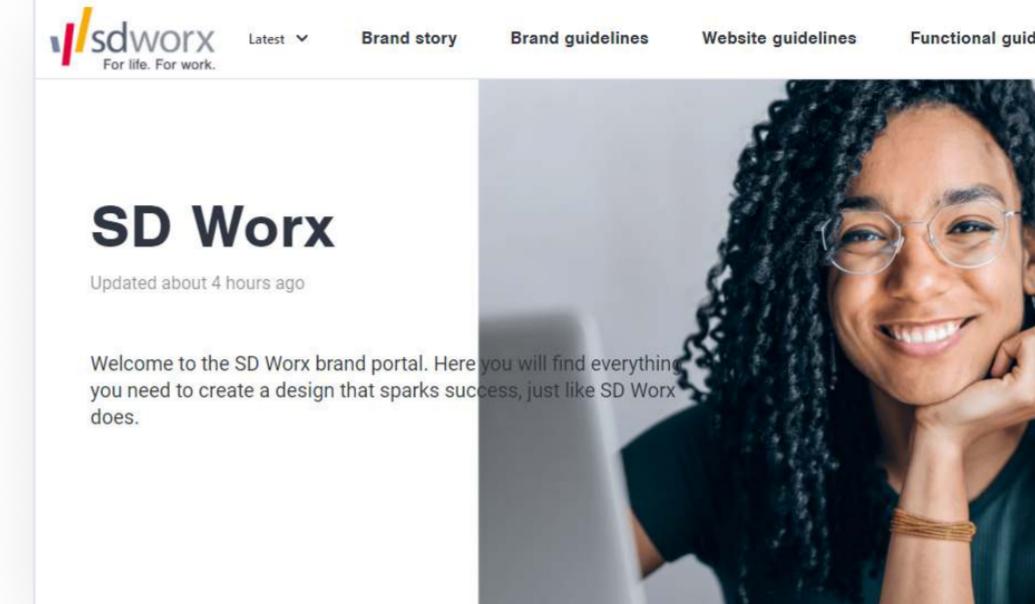

Brand

The SD Worx brand **portal**. Here you will find everything you need to create a design that sparks success, just like SD Worx does. You will also find the **design principles** here and an extensive **asset library**.

[View brand portal →](#)

[View Figma Brand Book →](#)

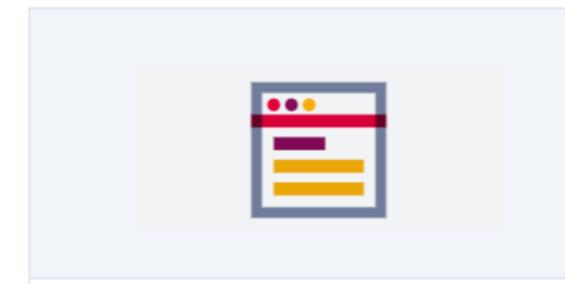

Brand

Welcome to the SD Worx brand portal. Here you will find everything you need to create a design that sparks success, just like SD Worx does.

We spark success at the heart of your business, so you and your people can thrive.

[View brand →](#)

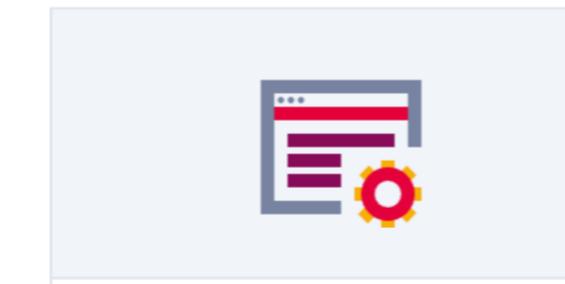

Website

Everything you need to create simple, intuitive and beautiful websites that follow SD Worx's guidelines can be found here.

Starting with general guidelines that are aligned with our brand and can be translated into a set of components, we use to build our public websites.

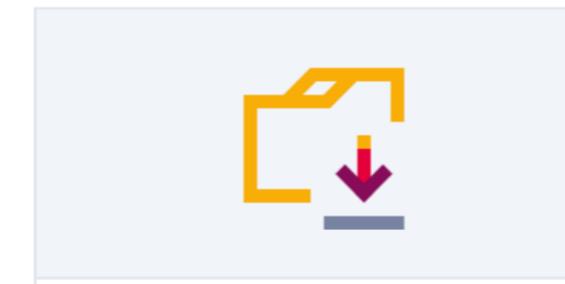

[View guidelines →](#)

Application

Use SD Worx's Application design language to create simple, intuitive and beautiful experiences in all of our web applications. The system consists of guidelines, components and patterns, all documented here.

Design comps - Webkit

SCSS & Angular

The screenshot shows the SDWORX CoE UX dashboard. At the top, there's a navigation bar with 'SDWORX / CoE UX / Overview / Summary'. Below it, a sidebar has a 'CU' icon and several icons for different tools. The main content area is titled 'CoE UX' and contains sections for 'About this project', 'Languages' (with SCSS selected), and 'Useful links' (including a link to 'CoE UX / README.md'). A note at the bottom says 'Both our develop and master branch are continuously deployed'.

Webkit

The webkit is our technical implementation of our design system. The webkit is based on scss and angular. Both can be used separately depending on the project.

[View our devops home →](#)

The screenshot shows the SD Worx Webkit documentation. The left sidebar includes 'About', 'Getting started', 'Contributing', 'Bootstrap V5', 'Design tokens', 'Icons', 'Components', 'Layout', 'Utilities', 'Example pages', and 'Angular Packages'. The main content is the 'About' section, which describes the Webkit as part of the SD Worx Design System and lists its components: Application Design Library (Figma), Patterns & Guidelines (Zeroheight), Brand Asset Library (Zeroheight), and Webkit. It also mentions the general flow of design and development.

The screenshot shows an IDE interface with multiple tabs: 'angular.json', 'project.json', 'package.json', and 'overview.component.html'. The 'angular.json' tab is active and displays the following JSON code:

```
{
  "$schema": "./node_modules/nx/schemas/workspace-schema.json",
  "version": 2,
  "projects": [
    {
      "name": "sdwds-docs",
      "sourceRoot": "apps/sdwds-docs",
      "targets": {
        "build": {
          "executor": "nx:build"
        }
      }
    }
  ]
}
```

Documentation

Our documentation can explains everything you need to know. The development will always show the next version of our webkit.

[View master documentation →](#)

[View development documentation →](#)

Source code

All of our source code is stored on our azure devops. This code is open source for all of our developers so they can contribute to a better central webkit.
